

Network Security Compliance Visibility and Control

Simplifying Network Security and Compliance Across Hybrid Environments

As networks expand across data centers, clouds, and the edge, maintaining consistent and compliant security policies becomes increasingly challenging. Manual audits, fragmented visibility, and overlapping rules introduce operational risk and slow down teams.

The Tufin Platform provides a unified control plane for centralized visibility, automated policy orchestration, and continuous compliance. As a part of the Tufin Platform, SecureTrack+ centralizes visibility and compliance management across the entire enterprise network. It unifies every policy, device, and rule into a single source of truth, giving network, security, and compliance teams the control they need to reduce audit effort, enforce policy enforcement, and eliminate risk with confidence.

Business Challenges

Network and security teams are under constant pressure to prove compliance, manage change, and reduce exposure, often without unified visibility, a lack of resources, or consistent governance process.

Common business challenges include:

- Limited oversight across complex, multi-vendor environments
- Policy sprawl driven by outdated, unused, or overly permissive rules
- Manual audit preparation and time-consuming reporting cycles
- Difficulty correlating vulnerabilities with exposed assets
- Limited accountability or traceability for policy changes

These gaps increase security risk, slow decision-making, and make it harder for teams to operate in a timely manner.

SecureTrack+ Solution

Tufin SecureTrack+ provides real-time visibility, automated compliance validation, and risk-aware policy controls across your hybrid network. Through centralized security policy management and optimization, risk mitigation, and audit readiness, SecureTrack+ unifies monitoring with actionable insights, helping teams reduce policy complexity, minimize security gaps, and maintain strong security governance.

High-Impact Scenarios

Centralized Security Policy Visibility

Gain a single view of every device, rule, and object across your network.

Simplify troubleshooting, verify accuracy, and manage policies efficiently with unified, contextual visibility.

Network Segmentation, Compliance & Audit

Define and enforce clear zone boundaries by continuously validating real traffic against intended segmentation.

Automate compliance checks, synchronize with IPAM systems, and generate audit-ready evidence for any framework.

Security Policy Cleanup & Optimization

Remove outdated elements and unused rules and analyze live traffic to eliminate overly permissive access.

Maintain a clean, efficient, and compliant security posture and apply clear, actionable recommendations that tighten policy control.

Change Tracking

Track every policy change, who made it, when, and why with full revision history.

Increase accountability, accelerate troubleshooting, and prevent configuration drift.

Vulnerability Exposure Prioritization

Integrate with vulnerability scanners to map risks directly to the security policies exposing critical assets.

Focus remediation on what matters most to reduce potential attack paths.

Network Mapping & Visualization

Visualize connectivity and traffic flows across your entire hybrid network.

Understand how devices, rules, and policies interact to accelerate troubleshooting.

Why SecureTrack+?

- **Continuous Compliance** – Automatically validate security policies against corporate and regulatory standards.
- **Faster Audits** – Produce complete, traceable audit reports and evidence in minutes.
- **Reduced Risk** – Identify and remediate policy weaknesses before they lead to security incidents.
- **Unified Visibility** – Monitor every policy, change, and device across on-premises, cloud, and edge environments.
- **Operational Efficiency** – Reduce manual effort, streamline maintenance, and free staff to focus on higher-value priorities.
- **Collaborative Governance** – Align security, network, and compliance teams with shared visibility and consistent security controls.

About Tufin

Tufin is the leader in network security policy management, helping enterprises manage and protect modern, multi-vendor networks that span data centers, cloud, and the edge. Tufin's platform provides a **unified control plane for the network**, centralizing visibility, automating policy orchestration, and enabling continuous compliance across today's fragmented and complex environments. Thousands of organizations worldwide rely on Tufin to deliver secure application connectivity, accelerate network changes, ensure audit readiness, and minimize risk exposure.
